| Teammitglieder | <u>Florentin Gewessler</u> | Christoph Knoll | Lukas Gaisbauer |
|-----------------------|----------------------------|-----------------|-----------------|

Geplante Stunden: 19h

Tatsächlich geleistete Stunden: 21h

Neuheiten

Hibernate Panache

Es ist nun ohne Probleme möglich, Daten via Hibernate Panache auf die Datenbank zu speichern.

Reverse Proxy

Ein DockerFile für einen Nginx Reverse Proxy wurde fertig eingerichtet. Damit können wir die Nachrichten vom Server zum Client verschlüsseln. Und dessen Config-File wurde fertiggestellt. Des Weiteren wurde die Funktion ausführlich getestet.

| Finished Tasks | Stunden |
|-----------------------------------|---------|
| Upload Data via Hibernate Panache | 3h |
| Reverse Proxy aufsetzen | 7h |
| | |

Probleme

- Beim Versuch, die Daten vom Rest Server per ProxyServer zu verschlüsseln, trat das Problem auf, dass jeder Pfad angegeben werden muss, der am Server offen sein soll. Somit kann man, wenn man Pfad variablen mitgibt, nicht alle Pfade bekannt geben.
- Probleme mit der Vererbung von Models in der Datenbank
